In Satna, **Dr. Shreya Saraf (MDS Periodontology)** provides professional teeth whitening services that can help you achieve a brighter and more confident smile.

Why Do Teeth Become Yellow?

There are several reasons why teeth lose their natural shine and turn yellow:

- **Poor oral hygiene** – Not brushing and flossing properly can lead to plaque buildup.
- **Food and drinks** – Regular consumption of tea, coffee, wine, or soft drinks stains teeth.
- **Smoking and tobacco** – Nicotine and tar lead to deep stains and discoloration.
- **Aging** – As we age, the enamel gets thinner, revealing the yellow dentin underneath.
- **Medications** – Certain medicines can cause discoloration of teeth.

No matter the cause, professional treatment can help bring back the lost whiteness.

Advanced Teeth Whitening Treatments Available

At **Saraf Dental Clinic**, patients get personalized care with the latest whitening techniques. Some of the treatments offered are:

1. Professional Cleaning

Regular dental cleaning removes plaque, tartar, and surface stains that cannot be eliminated by normal brushing at home.

2. Teeth Bleaching

A safe chemical process is used to lighten the shade of the teeth. This is one of the most common and effective whitening procedures.

3. Laser Whitening

A quick and highly effective treatment where whitening gel is applied to the teeth and then activated with laser light. It provides instant results.

4. Veneers

For people with permanent stains or enamel defects, dental veneers are thin shells placed over the teeth to give a natural white appearance.

5. Home Whitening Kits

Custom-made trays and whitening gels are provided for at-home use, under professional guidance.
